

## Gilbarco Veeder-Root launches Horizon

**Gilbarco Veeder-Root is pleased to announce the launch of the Horizon. The Horizon is the latest innovation to be added to Gilbarco Veeder-Root's range of dispensers.**

The Horizon has been engineered and constructed to offer reliability and longevity in the harshest of environments, increasing site uptime and lowering overall maintenance costs.

Its innovative design and exciting features makes Horizon one of the most reliable, secure and attractive pump in the market. Some of the key aspects include the world's most accurate and lowest drift piston meter, the V+ meter, secure intelligent pulser, polycarbonate door, improved nozzle boot in reinforced nylon for long lasting use, and a large 1.5" LED back lit customer display.

"Timeless and reliable, the Horizon is a flexible solution for your forecourt needs. We know that a dispenser is more than a 10 year investment and that is why we have ensured that every Horizon component is developed for durability and long life, saving you money over the long run. This product offers you the leading edge technology with the flexibility to suit your needs. Its attractive image also enhances your customers' forecourt experience" says Eric Denivelle, SSE Marketing Director.

The dispenser is available in both pressure and suction type versions. Backed by the support from Gilbarco Veeder-Root's industry leading global sales, technical and service partners; the Horizon offers petroleum site owners a competitive performance solution.
