

Petrol PLAZA

Let LSI Industries help you tailor the image of your Petroleum Fueling Stations and the message you send to your customers

Lighting is the #1 factor in determining what your customers see when they look at your site. And customers have a variety of questions as they make the decision whether or not to pull into your

facility. Does it provide high quality products? Is it a modern facility with the latest amenities and services? Will it be easy to quickly get what they want and move on? Are you an environmentally-conscious supplier that minimizes energy consumption? Is it safe?

Unfortunately, there is no one lighting solution that satisfies the needs of all potential customers as they drive past. Priorities are different for each different individual, but they can also vary by street, by neighborhood, by region, even by country.

Fortunately, LSI has the broadest range of LED lighting and graphics products in the petrol industry to allow you to tailor the appearance of your entire site to the desires of your customers, whatever and wherever they are. LSI LED products give you:

Bright, attractive yet energy-efficient canopies (see image 2)

Whether you are looking to maximize energy savings or wanting to provide the most brilliantly-lit canopy possible, LSI has the right product for you. With a range of light output packages from 8,000 to 20,000 lumens and multiple distributions (all available at over 100 lumens per watt) you can have just the right amount of light for your image. Add adjustable accent lights for dispensers and other vertical surfaces plus built-in motion and daylight sensors and you can have attractive curb appeal while still saving 50 to 75% over the energy cost of traditional HID fixtures. Available with a variety of mounting options for quick, easy installation into any style canopy.

Uniformly-lit forecourts with backlight cutoff (see images 3)

LSI's high-performance LED optical systems provide smooth, even illumination, even from widely or irregularly spaced poles, allowing you to lower light levels (and increase energy savings) while still creating bright, attractive areas. Available in a variety of attractive styles, all with precision backlight control to eliminate stray light from neighboring properties.

Bright store interiors with sharply lit shelves and displays (see image 4)

LSI has a complete package of interior LED lighting fittings to make all of your products jump off the shelves. Recessed T-grid fittings (available in both Metric and English dimensions) provide high lux levels, on horizontal surfaces as well as walls and vertical shelves and displays. Accent lights are available in both recessed track heads and linear strip designs to provide punch to special products or graphics or architectural features like coves or counters.

Graphic Elements - What you light is as important as how you light it

No other lighting company can supply you with a wide range of signs and graphics to be illuminated. From pump toppers (illuminated or non-illuminated), logos on trash receptacles and other exterior signs to menu boards and point-of-sale interior graphics, LSI can supply a complete image package.

LSI Industries - The most complete lighting and graphics supplier for the petroleum industry

LSI Industries is the world's largest supplier of LED petroleum lighting, with 14 facilities across the U.S. and Canada and sales outlets around the world. LSI is fully vertically integrated and highly automated, allowing us to control every step of the design and manufacturing process to supply the highest quality and most rigorously testing fittings available.

Contact LSI for complete information on the above products, and a whole lot more. The LSI LED package also includes lights for car washes, floodlights, landscape lighting, indoor/outdoor designer lights, industrial and warehouse lighting, cooler and freezer lights, parking garage fittings, emergency lights and more. Plus a complete line of traditional fluorescent and HID fittings.
