

TMS 30 Petrol Management System from Scheidt & Bachmann - successful installation in the Philippines

December 2014 saw the system integrator Scheidt & Bachmann successfully install its petrol station retail systems into the Philippines. Scheidt & Bachmann installed its Petrol Station Management Systems TMS 30 into three petrol stations owned by the retailer Metro Oil. After Indonesia, this was another footprint in Asia for the Mönchengladbach (Germany) based company for both its hardware and software systems.

The innovator Scheidt & Bachmann has expanded its position in the international marketplace with the installation for three Philippine petrol stations owned by the privately owned company Metro Oil. The German company was able to draw on its experiences of providing customized solutions and to adapt to the needs of the market. Especially important was the user-friendly cashier system.

Scheidt & Bachmann delivered its retail system '**TMS 30**', with its highly intuitive user interface and space saving hardware. The whole Petrol Station Management Systems TMS 30 comprised of: Station server, incorporating the BOS and POS 1, a 2nd client POS, an additional client BOS and the Courtmaster forecourt controller. The Station server offers cashier and back-office functions from one system and can be expanded to several client workstations of either POS or BOS. This flexibility allows the TMS 30 system to be adapted to the needs of any petrol station, large or small. The Courtmaster enables a connection between all forecourt devices and the station management system, whatever communication protocol they might use. Scheidt & Bachmann has high hopes of expanding its Asia market based on the overwhelming success of these first three sites.
