

UNITI expo: Hectronic offers digital solutions for petrol station 4.0

Hectronic focuses on creating added value through networked and digital systems.

With the **HecFuel App**, Hectronic presents a mobile and for the first time a large area covering solution that enables fast and flexible online authorisation of refuelling. The refuelling process is accelerated in a user-friendly manner. Waiting times at the petrol station are reduced and traffic can be much increased. Additionally, the customer benefits from a customer-specific Look & Feel of the app, a digital tank receipt (including history) and individual functional enhancements. Furthermore, the proven and globally used **PetroPoint system** for automatic vehicle and driver recognition was valuably optimised. In addition to maximum efficiency in fleet management, PetroPoint also proves itself in the public sector. The nozzle unit **PetroScan** is new at the fair. It exists of an universal solution for all common petrol nozzles which is smaller, lighter and therefore also more robust. The **FleetNet software service** sets new standards. In addition to processing authorization requests from 18 card issuers at around 400 acceptance points, it is also possible to receive and process authorisation requests of tank technology by other manufacturers.

Innovative solutions in tank content management will also be presented in addition to intelligent petrol station management. This applies to individual petrol stations as well as entire networks. The **PetroLine ATG Cloud Service** is the main focus here. Stocks and alarms can be retrieved online from anywhere and at any time. This sustainably reduces costs, facilitates logistics and ensures a continuous fuel supply.

In addition to our digital solutions, you can also expect fuel terminal innovations, both for the public petrol station and for the fleet petrol station. On the one hand, there is the **HecStar CRID solution**. With an optimised "Customer Experience" we meet all requirements for a customer-friendly terminal by paying directly at the petrol pump. You can also look forward to a new generation of extremely flexible terminals that will offer even more convenience for operators and customers in the future.

Convince yourself! Learn and see our innovations and digital solutions and visit us at the UNITI expo 2018 in Stuttgart from May 15-17, 2018. You will find us in hall 5, booth A18.
