

Bever Innovations signs new global partnership

Dutch LED lighting manufacturer announces strategic global partnership with Visive Group Ltd.

Bever Innovations has signed a new manufacturing and supply agreement with Visive Group Ltd. The two companies have been working together for months to develop a new LED contour tube.

Established in 2000, Visive Group is a leading UK designer and global manufacturer of LED contour lighting. Visive's LED lighting division supplies contour tubing, along with smart control components which are installed on service stations and retail shops around the world.

"This collaborative relationship provides Bever Innovations with the opportunity to have our own branded LED contour tube which complements our other wide-range of innovative LED products- and solutions," said Commercial Director of Bever Innovations, Erwin Dingemanse.

Bever Innovations will sell the LED Contour tube globally, excluding the UK, Ireland, and China. Visive will manage trade in these regions.
