

IFS F - International Forecourt Standards Forum

IFS F is a community dedicated to enabling technology standards for the benefit of retailers of automotive fuel and energy.

Our approach is to collaborate with other standards organisations and relevant institutions to achieve common standards for interoperability of forecourt and convenience devices and services. The IFS F depends on support from retailers, suppliers and other industry stakeholders who contribute to and benefit from shared standards.

IFS F's objective is to ensure harmonisation of equipment interconnectivity and communication standards

Over the past 25 years IFS F has developed standards covering all aspects and systems of a forecourt site.
