

World Petroleum Partnership WPP

World Petroleum Partnership (WPP), head-quartered in Dubai, is a solution based company that provides environmental protection and integrated services to the oil and gas sector. The company has two operating divisions:

Environmental Protection

With specialization in Risk Management, Environmental Analytics and Emergency Planning we are well positioned to provide a comprehensive solution for managing environmental risks.

Our core strength is derived from our risk management decision making process, which focuses on the key elements of Risk Identification and Assessment, Evaluation and Selection of feasible solutions, Implementation and Monitoring. As professional risk managers we understand the need to optimize shareholder value through sound decision making.

Integrated Services

Our model is equally designed to provide products to the oil and gas sector.

- Integrated Mobile Petrol Stations & Compact Stations – “Fueling your business”
- Retail Outlets – “Beyond fuel”
- PetroRid – “For a cleaner tomorrow”
- Fuel Transportation Solutions – “From storage to distribution”
- Emergency Response Equipment – “Managing your operation risks”

Equipment & Services

WPP Integrated Mobile Petrol Stations (IMPS) can be fully adapted to meet client’s specifications. When compared with conventional stations, our solution has a faster return due to lower up front capital expenditure in relation to future income. Mobility means that the stations could be deployed anywhere including remote areas such as large construction sites, mines, airfields, military bases, large fleet garages and disaster relief centers. Once the concrete base is setup, the IMPS can be operational within 24 hours. It is environmentally friendly and exceptionally safe due to a number of HSE features. We are confident that our Integrated Mobile Petrol Stations would greatly assist our clients to grow their fuel retail business.

WPP Compact Petrol Stations are pre-fabricated in the factory and come ready to be assembled on site. All equipment including the canopy structure can be shipped within the tanks, which is then used as a shipping container for the transportation, hence minimizing logistics costs.

WPP Modular C-store, complementing our stations offering is the option to establish convenience stores. Keeping in line with our philosophy of being a world class leader in the delivery of environmentally safe solutions, the retail outlets are manufactured off-site using upcycled shipping containers. These shipping containers are highly adaptable and can be expanded similar to traditional retail shops. The product range can be as diverse as the imagination allows, however the core focus will be on providing quality convenience stores using pre-engineered modular technology that is environmentally friendly, fast to construct, low cost, extremely safe, durable and stronger than other types of construction available in the market. These stores can be scaled up as per customer needs, transported, recycled or reused at the end of their life and contribute back to the investment. These stores have a lower maintenance and operating cost than anything in the modular construction industry today. At significantly reduced cost & time, we will provide quality facilities, with excellent customer service standards to ensure a secure and enjoyable place to work and shop. Whatever design you want, our construction system has the flexibility to work with you to provide it.
